THE QUICK RESPONSE
MONITORING ALARM CENTER™

Your Plan for Growth

THE QUICK RESPONSE
MONITORING ALARM CENTER™

How are you increasing your profits this year?

Create recurring revenue streams when you add these capabilities to your services

Presented by Quick Response Monitoring Alarm Center | Securing the future for dealers like you!™

VIDEO MONITORING

OzVision, one of the leaders in video monitoring, offers video verification for security and remote monitoring management. OzVision's notification and look-in capabilities lets customers remotely manage their business and home from any location and at any time.

Benefits to Dealers

- Better cost-benefit return than guards or self monitoring
- Alarm verification/validation
- Video patrols to support requests for police assistance
- Digital recording/documentation
- Open & Close reports

Benefits to Customers

- Minimizes costly false alarm fines
- Employee/Nanny supervision
- Manage business assets remotely
- Full color files easily downloaded

ACCESS CONTROL

Since approximately 85 percent of alarm monitoring customers do not currently have electronic access control, HID VertX CS is the ideal product for alarm dealers to present to their customers for direct connection to your central station.

For existing customers...VertX CS is a valuable add-on to any existing system, providing a security upgrade that's efficiently managed by Quick Response. Plug and play installation connects from one to 64 access control readers to VertX CS.

For new business...VertX CS adds more value to your central station-based proposals with access control to potential customers, and more recurring revenue in business services for dealers.

INTERNET MONITORING

Alternative technologies (predominantly wireless) are changing the way the security industry monitors communications. Monitoring over the internet for customers who use their cell phones exclusively is emerging as a faster (3 seconds) alternative or in conjunction with the cellular programs.

Customers who use their cell phones exclusively, but who also have cable, modem or some type of internet access are supported by Honeywell's AlarmNet-i systems, DSC T-Link, and NAPCO NetLink. Currently the AlarmNet-i system is compatible with a wide range of control panels.

Benefits to Dealers

- Quick installation even behind firewalls
- Single source billing
- Competitively priced

Benefits to Customers

- Complete ease of configuration
- Flexibility of transmitting signals to multiple locations
- Fully encrypted communication
